Troubleshooting

Nearly all workrooms that are having problems are not doing this

Before tying the cord to the bottom ring all the cord needs to be unwound from the shaft.

All the cords should be uniformly taut. The cords should never be slack in any position. There should be no cord wrapped on the shaft at all when the blind is fully down.

Nylon Chain Lengths

0.6m 0.9m 1.2m 1.5m 1.8m
0.5m and 2.1m white only

***1mm cord and rings for the back of the blinds are available in white or black

** A Clutch Set includes all the components to make a blind with 4 columns of rings (a roman up to 960mm wide). Each extra column of rings add a bracket and a clip. Then just add shaft, cord and a chain
